

RACING AND WAGERING WESTERN AUSTRALIA

**Notice to all trainers and veterinarians regarding altrenogest use in
Standardbreds**

A reminder to all trainers and veterinarians that the administration of altrenogest (for example, *Regumate*) to a Standardbred filly, mare, gelding, colt or stallion, and its subsequent detection in a race day sample from that filly, mare, gelding, colt or stallion would be considered a detection of a prohibited substance and therefore a contravention of the Australian Rules of Harness Racing.
