

RACING AND WAGERING
WESTERN AUSTRALIA

WA RACING INDUSTRY

BUSHFIRE EMERGENCY INFORMATION KIT

Racing and Wagering Western Australia is committed to ensuring the welfare of all thoroughbreds, standardbreds and greyhounds during a bushfire crisis.

For anyone needing assistance related to horse or greyhound welfare due to bushfires, please email animal.welfare@rwwa.com.au or contact the **Racing Integrity Hotline on 08 9445 5565** (recorded message service).

This document outlines those who may be able to support fire affected owners and trainers looking to house their horses and greyhounds in safe areas. If you wish to be added to the list of people who may be able take horses or greyhounds in, and can offer space in a bushfire emergency, please email animalwelfare@rwwa.com.au.

Awareness

In an emergency, it pays to be prepared. Being aware of the conditions around you may provide you with valuable time to enact your bushfire plan.

Ensure that you use the fire danger rating tool daily during bushfire season to monitor conditions in your area.

In the event of a fire, take note of the bushfire warning systems for updates on the severity of bushfires once they are underway.

There are a number of ways you can stay informed regarding warnings and advice for your area.

Local news: Listen to ABC Local Radio, commercial and designated community radio stations

FIRE DANGER RATINGS:

Use this tool daily during bushfire season to monitor conditions in your area.
Based on forecast weather conditions, the higher the rating, the higher the risk of bushfire.

BEFORE A BUSHFIRE

CATASTROPHIC

The worst conditions for a fire. Homes are not designed or built to withstand a fire in these conditions. The only safe place is away from bushfire risk areas.

EXTREME SEVERE VERY HIGH

Seek out information and be ready to leave, or stay and actively defend your property if a fire starts. Only stay if you are 100% prepared.

HIGH LOW-MODERATE

Be vigilant. Check your fire plan and continue to monitor conditions as they can change quickly.

information source

BUSHFIRE WARNING SYSTEMS:

A bushfire warning system is similar to a cyclone categorisation tool. The alerts provide information on the severity of bushfires once it has started. The alert level reflects the risk to life and property.

DURING A BUSHFIRE

EMERGENCY WARNING

WATCH AND ACT

ADVICE

EMERGENCY WARNING

An out of control fire is approaching very fast. You need to act immediately to survive. If you haven't prepared your home it is too late. You must leave now if it is safe to do so.

WATCH AND ACT

A fire is approaching and is out of control. Put your plan into action. If your plan is to leave, make sure you leave early. Only stay if you are mentally, physically and emotionally prepared to defend your property and you have all the right equipment.

ADVICE

A fire has started but there is no immediate danger. Stay alert and watch for signs of a fire.

Horses - What to do in a Bushfire Emergency

Bushfire Plan

It is important to have a plan of action for how you will keep your horses safe during a bushfire. By writing down a plan for animal welfare in emergencies you can help ensure you make the best possible decisions to protect the safety of your horses.

Survival plan for your horses' welfare in an emergency:

1. Evacuating horses:

- a. Which horses will we evacuate?
- b. Which horses can't be evacuated?
- c. How will we know when it is time for us to evacuate the horses? (high risk days, smell/see smoke, emergency alerts)
- d. How will we transport the horses being evacuated?
- e. Where can we take the horses? (e.g. agistment or boarding options, friends, relatives, saleyards, pony clubs, race clubs)
- f. What are the possible evacuation routes? (consider the fire moving in different directions) .
- g. If we are not at the property who is our backup contact who can move our horses for us in the case of an evacuation?

2. Safer areas for horses:

- a. How will we protect horses if they are unable to be evacuated? (e.g. moving horses to paddocks with no vegetation or overhead power lines)

3. What is our plan for after the fire?

- a. How will we keep horses contained if fencing is destroyed, and provide food and water (in the case of burnt paddocks, destroyed sheds, mains water unavailable, contaminated dams)?

Ensure everyone at your household/property is aware of the bushfire plan. Print out the plan and display it where everyone can see it.

Emergency Kit

On high fire risk days, assemble essentials to take with you in case you have to evacuate:

- At least three days of feed.
- Halters and leads.
- First aid kit and any medications.
- Proof of ownership/identification records.

Preparations

- Ensure your horses always have a water supply that will last them at least five days, even if you expect to return to your property that evening.
- Have a map of your property with gates, food and water locations marked in an easy to find place, in case someone has to move your horse for you.
- Remove rugs, halters and fly veils from horses on high fire risk days as these often melt and cause burns during fires.
- Ensure your horse float/truck is operational and roadworthy at all times.

Further suggestions of what you can do to prepare your property:

- Cut the grass around your property to 10cm or less.
- Prune shrubs so they are not dense and remove any shrubs from against the home.
- Clean gutters.
- Check that gas valves face away from your property.
- Keep gas cylinders away from likely direction of fire.
- Remove wood, mulch or any flammable material against or near the house.
- Create a minimum two metre gap between your house and tree branches.
- Install metal fly wire mesh on all windows, vents and install a protective screen on evaporative air conditioners.
- Block any gaps under floors, in roof spaces, under eaves, external vents, skylights, chimneys and wall claddings.

Additional suggestions for rural properties:

- Make sure fire trucks can access and turn on your property.
- Check bridge loading and cattle grid loading for fire truck access.
- Create fire breaks along paddock boundaries.
- Store petrol and gas safely away in a shed.
- Install underground water pumps that lead from dams to the house.
- Create a mineral earth firebreak along the boundary of your property.

Things to remember

- Do not shut your horse in the stable on high fire risk days.
- Evacuate as early as possible – horses instinctively react to extreme conditions such as a fire with nervousness and panic, and may become aggressive or resist capture if you wait until a fire is close before evacuating.
- Do not cut fences or leave external property gates open during a fire as this can pose a safety risk to people evacuating and emergency responders.

If it is too late to leave

If things do not go the way you had planned and you have to remain on the property, ensure there is a backup plan.

- Think about the best place to seek shelter for your horses – an area outside that has already been burnt such as a paddock or a large dirt paddock with a dam.

Returning to your property

Before returning to your property, wait to be given the go ahead by the appropriate authorities.

- Firstly, return without the horses to assess and prepare the property for their return, including:
 - » Assess food supply.
 - » Check for water contamination.
 - » Remove debris.
 - » Check fences.
 - » Check for fallen or falling electrical wires/poles.
 - » If you have left any horses behind, assess them for illness or injury potentially sustained during the fire.
- Ensure the ground has completely cooled before returning horses to paddocks.
- Take care when releasing horses back to the property – they may become disoriented or frightened if the environment has changed.

- Monitor horses daily to ensure they are eating properly, have no injuries and are settling.
- Monitor horses for signs of after effects e.g. smoke inhalation and burns can manifest symptoms days after a fire.
- Dispose of contaminated water and replenish with fresh drinking water.
- Ensure horses have access to quality feed and/or pasture.
- Be cautious of food items stored in refrigeration as power supplies may have been interrupted.

The most important consideration in the short term is ensuring horses have access to safe drinking water and a reliable food source:

- Do not allow horses to drink water that is stagnant as it could contain harmful bacteria, ash or debris.

If your horse has any injury or health problems seek veterinary assistance.

Evacuation Areas

Region	Evacuation areas/facilities	Address	Contact
Metropolitan	Ascot Racecourse	71 Grandstand Road Ascot WA	Managing Director, John Yovich 0439 910 068 General Manager Event Operations Tony Favazzo - 0412 447 085

Greyhounds - What to do in a Bushfire Emergency

Bushfire Plan

It is important to have a plan of action for how you will keep your greyhounds safe during a bushfire. By writing down a plan for animal welfare in emergencies you can ensure you make the best possible decisions to protect the safety of your greyhounds.

Survival plan for your greyhounds' welfare in an emergency:

1. Evacuating greyhounds:

- a. Which greyhounds will we evacuate?
- b. Which greyhounds can't be evacuated?
- c. How will we know when it is time for us to evacuate the greyhounds? (high risk days, smell/see smoke, emergency alerts)
- d. How will we transport the greyhounds being evacuated? Know where cages, leads etc. are stored.
- e. Where can we take the greyhounds? (e.g. family, friends, boarding facility)
- f. What are the possible evacuation routes? (consider the fire moving in different directions)

2. Safer areas for greyhounds

- a. How will we protect greyhounds if they are unable to be evacuated?

3. What is our plan for after the fire?

- a. How will we keep greyhounds contained if fencing is destroyed, and provide food and water (in the case of burnt paddocks, destroyed sheds, mains water unavailable, contaminated dams)?

Ensure everyone at your household/property is aware of the bushfire plan. Print out the plan and display it where everyone can see it.

Emergency Kit

On high fire risk days, assemble essentials to take with you in case you have to evacuate:

- At least three days of greyhound food.
- Harnesses, leads, halters, muzzles.
- First aid kit and any medications.
- Vaccination records.
- Proof of ownership/identification records.
- Bedding for greyhounds.

Preparations

- Ensure your greyhounds always have a water supply that will last them at least five days, even if you expect to return to your property that evening.
- Ensure your animal trailers are roadworthy at all times and easily accessible.
- Ensure greyhounds are microchipped, and that microchip details are updated, to help facilitate their return in case they become lost.

Further suggestions of what you can do to prepare your property:

- Cut the grass around your property to 10cm or less.
- Prune shrubs so they are not dense and remove any shrubs from against the home.
- Clean gutters.
- Check that gas valves face away from your property.
- Keep gas cylinders away from likely direction of fire.
- Remove wood, mulch or any flammable material against or near the house.
- Create a minimum two metre gap between your house and tree branches.
- Install metal fly wire mesh on all windows, vents and install a protective screen on evaporative air conditioners.
- Block any gaps under floors, in roof spaces, under eaves, external vents, skylights, chimneys and wall claddings.

Additional suggestions for rural properties:

- Make sure fire trucks can access and turn on your property.

- Check bridge loading and cattle grid loading for fire truck access.
- Create fire breaks along paddock boundaries.
- Store petrol and gas safely away in a shed.
- Install underground water pumps that lead from dams to the house.
- Create a mineral earth firebreak along the boundary of your property

Things to remember

- Dogs may hide or flee during fire, so they should be brought inside so they can be easily found in case of evacuation.

If it is too late to leave

If things do not go the way you had planned and you have to remain on the property, ensure there is a backup plan.

- Think about the best place to seek shelter for your greyhounds – a room that has two entry and exit points like a laundry or an area outside that has already been burnt such as a paddock.

Returning to your property

Before returning to your property, wait to be given the go ahead by the appropriate authorities.

- Firstly, return without the greyhounds to assess and prepare the property for their return, including:
 - » Assess food supply.
 - » Check for water contamination.
 - » Remove debris.
 - » Check fences.
 - » Check for fallen or falling electrical wires/poles.
 - » Check for kennel damage.
 - » If you have left any greyhounds behind, assess them for illness or injury potentially sustained during the fire.

- Ensure the ground has completely cooled before returning greyhounds to the property.
- Take care when releasing greyhounds back to the property – they may become disoriented or frightened if the environment has changed due to the result of a fire.
- Monitor greyhounds daily to ensure they are eating properly, have no further injuries and are settling.
- Monitor greyhounds for signs of after effects e.g. smoke inhalation and burns can manifest symptoms days after a fire.

The most important consideration in the short term is ensuring greyhounds have access to safe drinking water and a reliable food source:

- Do not allow greyhounds to drink water that is stagnant as it could contain bacteria, ash or debris.
- Dispose of contaminated water and replenish with fresh drinking water.
- Ensure greyhounds have access to quality food.
- Be cautious of food items stored in refrigeration as power supplies may have been interrupted.

If your greyhound has any injury or health problems seek veterinary assistance.
